

FAQ's

How does TempSure Envi work?

TempSure Envi uses radiofrequency to promote collagen and tighten skin*. Ideally suited to smooth fine lines and wrinkles, the treatment uses heat to spark your body's natural ability to generate new collagen. The new collagen fibers are tight, dense and neatly organized giving you tighter, younger-looking skin!

Is TempSure Envi right for me?

TempSure Envi is right for everyone! Treatments are extremely safe and can be performed on all skin types. Unlike other technologies, treatments can be performed all year round! Please discuss with your provider to determine if TempSure Envi is right for you.

What can I expect?

TempSure Envi is a comfortable, safe procedure that doesn't have any downtime. Patients have reported that it feels similar to a relaxing hot stone massage. After the procedure you might have slight redness, which is caused by your skin's elevated temperatures during treatment and will subside soon afterwards. You will be able to return to your normal day-to-day activities immediately after the treatment!

How long does the treatment take?

Treating the entire face takes anywhere from 30-60 min. If you would like a specific area treated (e.g., the delicate areas around your eyes, forehead, or smile lines) your procedure could be completed in as little as 30 minutes! Because the collagen rebuilding process continues to work days, weeks, even months after your treatment, a series of treatments are required for the best results.

How many treatments are recommended?

3 – 5 treatments are recommended about 4 weeks apart to boost the collagen rebuilding process. For optimal results, work with your provider to develop a treatment plan designed specifically for you.

About TempSure Envi

As we age, our bodies can't generate collagen as fast as it used to. As a result, wrinkles and fine lines form leaving you with smile lines, crow's feet, and other bothersome creases. TempSure Envi is a new radiofrequency treatment that minimizes wrinkles and fine lines, tightens skin* and improves the appearance of cellulite. It's safe for all skin types and levels of sun exposure, so it fits perfectly into any beauty maintenance routine, any time of year! There's no surgery, no needles and no downtime so you can immediately get back to what you were doing and look great doing it!

How TempSure Envi Works

TempSure Envi delivers radiofrequency to gently heat your skin. Increasing your skin's temperature for a defined, therapeutic time will trigger your body's natural reaction to produce new collagen. The new collagen fibers are tight and dense leaving you with beautiful, younger-looking skin!

What can I expect?

The TempSure Envi treatment is delivered using handpieces that have been carefully designed to safely deliver radiofrequency energy into delicate areas, where your skin has become thinner during the natural aging process. This includes (but is not limited to) forehead lines, frown lines, crow's feet, smile lines, wrinkles and cellulite on the body. TempSure Envi has been known to give you an instant glow resulting in a smoother appearance and younger-looking skin.
